

**READ THIS BEFORE YOU BEGIN:**

- Study the illustrations and sequence of assembly. THE SEQUENCE OF ASSEMBLY IS EXTREMELY IMPORTANT. READ ALL INSTRUCTIONS BEFORE USE. USE RMS™ MOTORS AND RELOAD KITS ONLY IN ACCORDANCE WITH ALL INSTRUCTIONS. Review the parts list to become familiar with all parts before assembly. IF ANY PARTS ARE missing or damaged, contact RCS at 1-435-665-7100 or email at warranty@aerotech-rocketry.com.
- DO NOT USE ANY PARTS OF THE RMS™ SYSTEM THAT ARE DAMAGED IN ANY WAY. In doubt, contact RCS at the number above for assistance.
- DO NOT MODIFY THE MOTOR IN ANY WAY. Modification of the motor or the reload kit parts could result in motor failure, lead to the destruction of both your rocket and motor, and may cause personal injury, death and/or property damage. Modification of the motor or reload kit in any way will invalidate your motor warranty.
- USE ONLY AEROTECH/RCS RMS™ RELOAD KITS AND MOTOR PARTS TO REBUILD YOUR RMS™ MOTOR. The Aerotech/RCS reload kits have been designed specifically for use in your particular Aerotech/RCS RMS™ motor. Use of imitation components may destroy your motor, rocket, and payload and will invalidate your motor warranty. Only use Aerotech/RCS RMS™ reload kits intended for your specific Aerotech/RCS RMS™ motor. DO NOT INTERCHANGE PARTS! Do not use Aerotech/RCS RMS™ reload kits or motor components for any other purpose than to refurbish an Aerotech/RCS RMS™ motor.
- DO NOT REUSE ANY OF THE DISPOSABLE PARTS OF THE RMS™ RELOAD KIT. This includes the liner, nozzle, and o-rings. These components have been designed for one use only and must be discarded after firing. Reuse can result in motor failure during subsequent operation and will invalidate your motor warranty.
- Motors are hot after firing. Although the RMS™ operates at a lower temperature than most disposable motors, the higher thermal conductivity of the aluminum motor parts may make it seem otherwise. If necessary to handle a motor before it has cooled down, use a rag or similar article.
- Read and follow the safety code of the Tripoli Rocketry Association (TRA) and comply with all federal, state and local laws in all activities involving high power rockets.

**DO NOT OPEN RELOAD KIT UNTIL READY TO USE.**

**PARTS:**

**RMS™-98 HARDWARE**

**ITEMS NEEDED FOR USE:**

- Synco™ Super Lube™ or other grease
- Hobby knife
- Electric match w/thermalfire, Firestar™ or other igniter
- Masking tape
- Wet wipes or damp paper towels

**Chapter 1. Forward Closure Assembly**

1. Apply a light coat of Synco™ Super Lube™ or other grease to all threads and both o-rings. This will facilitate assembly and prevents the threads from seizing.

2. **Fig.-1:** Insert the smoke charge insulator into the smoke charge cavity until it is seated against the forward end of the cavity.

3. **Fig.-2:** Apply a liberal amount of grease to one end of the smoke charge element. Insert the greased end of the smoke charge element into the smoke charge insulator until it is seated against the forward end of the smoke charge cavity. Set the completed forward closure assembly aside.

4. Perform the remaining assembly steps with the liner held in a horizontal position. Install the propellant grains into the liner, seated against the forward seal disk. **NOTE:** Three propellant grains are shown in all illustrations. RMS-98/10240 motors use four (4) grains.

**Chapter 2. Case Assembly**

1. **Fig.-3:** Using a hobby knife or similar tool, carefully deburr (chamfer) both inside edges of the liner tube (3-5/8” O.D. black plastic tube).

2. **Fig.-4:** Place the greased forward seal disk (3/32” thick X 3-3/8” O.D.) o-ring into the groove in the forward seal disk.

3. **Fig.-5:** Insert the smaller (o-ring) end of the seal disk into the open end of the liner tube until the seal disk flange is seated against the end of the liner.

4. **Fig.-6:** Perform the remaining assembly steps with the liner held in a horizontal position. Install the propellant grains into the liner, seated against the forward seal disk. **NOTE:** Three propellant grains are shown in all illustrations. RMS-98/10240 motors use four (4) grains.

5. **Fig.-7:** Push the liner assembly into the motor case aft (nozzle) end first until it is equally recessed from both ends of the case. **NOTE:** A coating of grease on the outside surface of the liner will facilitate installation and casing cleanup after motor firing.

6. **Fig.-8:** Place the greased forward (3/16” thick X 3-5/8” O.D.) o-ring into the forward (bulkhead) end of the case until it is seated against the forward seal disk.

7. **Fig.-9:** Thread the forward closure assembly into the forward end of the motor case by hand until it is seated against the case.

8. **Fig.-10:** Insert the nozzle into the aft end of the motor case, with the nozzle flange seated against the liner assembly.

9. **Fig.-11:** Place the greased aft (3/16” thick X 3-5/8” O.D.) o-ring into the groove in the nozzle.

10. **Fig.-12:** Thread the aft closure into the aft end of the motor case by hand until it is seated against the case. **NOTE:** There will be considerable resistance to threading in the closure during the last 1/8” to 3/16” of travel. It is normal if a slight (1/16” to 3/32”) gap remains between the closure and the case and the grains rattle slightly in the liner after tightening.
Chapter 3. Preparation For Flight
Install Igniter Against Smoke Charge.

Chapter 4. Post-Recovery Cleanup
NOTE: Perform motor clean-up as soon as possible after motor firing. Propellant and delay residues become difficult to remove after 24 hours and can lead to corrosion of the metal parts. Place the spent motor components in the reload kit plastic bags and boxes and dispose of properly.

4-1. After the motor has cooled down, unthread and remove the forward and aft closures.
4-2. Remove the smoke charge insulator from the forward closure and discard. Using wet wipes or damp paper towels, remove all delay and propellant residue from the closures.
4-3. Remove and discard the forward and aft o-rings from the motor case. Remove the liner, forward seal disk and nozzle from the casing by pushing on the nozzle end and discard. NOTE: The phenolic seal disk provided with this reload kit is designed for use only once. Using wet wipes or damp paper towels, wipe the inside of the casing to remove all propellant residue.
4-4. Apply a light coat of grease to all threads and the inside of the motor case. Reassemble metal parts and store motor in a dry place.

Chapter 5. First Aid
For a minor burn, apply a burn ointment. For a severe burn, immerse the burned area in ice water at once and see a physician as quickly as possible. In the unlikely event of oral ingestion of the propellant, induce vomiting and see a physician as quickly as possible. The AeroTech/RCS composite propellant consists primarily of ammonium perchlorate and a rubber-like plastic elastomer.

Chapter 6. Disposal
Damaged or defective reload kits should be returned to RCS.

Chapter 7. Fire Safety
Tests show that the pyrotechnic components of RMS™ reload kits will not explode in fires and normally will not ignite unless subjected to direct flame and then will burn slowly. Use water to fight any fires in which AeroTech/RCS RMS™ reload kit pyrotechnic components may become involved: Direct the water at the AeroTech/RCS RMS™ reload kit pyrotechnic components to keep them below their 550 deg. F autoignition temperature. Foam and carbon dioxide fire extinguishers will NOT extinguish burning propellants of the type used in RMS™ reload kit pyrotechnic components. Keep reload kit pyrotechnic components away from flames, sources of heat and flammable materials.

FOR A MINOR BURN, APPLY A BURN OINTMENT. FOR A SEVERE BURN, IMMORSE THE BURNED AREA IN ICE WATER AT ONCE AND SEE A PHYSICIAN AS QUICKLY AS POSSIBLE. IN THE UNLIKELY EVENT OF ORAL INGESTION OF THE PROPELLANT, INDUCE VOMITING AND SEE A PHYSICIAN AS QUICKLY AS POSSIBLE. THE AEROTECH/RCS COMPOSITE PROPELLANT CONSISTS PRIMARILY OF AMMONIUM PERCHLORATE AND A RUBBER-LIKE PLASTIC ELASTOMER.
