Chapter 1. Forward Closure Assembly

1-1. Apply a light coat of Synco™ Super Lube™ or other grease to all threads and both o-rings. This will facilitate assembly and prevents the threads from seizing.

1-2. Fig.-1: Insert the smoke charge insulator into the smoke charge cavity until it is seated against the forward end of the cavity.

1-3. Fig.-2: Apply a liberal amount of grease to one end of the smoke charge element. Insert the greased end of the smoke charge element into the smoke charge insulator until it is seated against the forward end of the smoke charge cavity. Set the completed forward closure assembly aside.

Chapter 2. Case Assembly

2-1. Fig.-3: Using a hobby knife or similar tool, carefully deburr (chamfer) both inside edges of the liner tube (3-5/8” O.D. black plastic tube).

2-2. Fig.-4: Place the greased forward seal disk (3/32” thick X 3-3/8” O.D.) o-ring into the groove in the forward seal disk.

2-3. Fig.-5: Insert the smaller (o-ring) end of the seal disk into the open end of the liner tube until the seal disk flange is seated against the end of the liner.

2-4. Fig.-6: Perform the remaining assembly steps with the liner held in a horizontal position. Install the propellant grains into the liner. **NOTE:** Only three propellant grains are shown in all illustrations for clarity. RMS-98/2560 motors use one (1) grain, RMS-98/5120 motors use two (2) grains, RMS-98/7680 motors use three (3) grains, and RMS-98/10240 motors use four (4) grains.

2-5. Fig.-7: Push the liner assembly into the motor case aft (nuzzle) end first until it is equally recessed from both ends of the case. **NOTE:** A coating of grease on the outside surface of the liner will facilitate installation and casing cleanup after motor firing.

2-6. Fig.-8: Place the greased forward (3/16” thick X 3-5/8” O.D.) o-ring into the forward (bulkhead) end of the case until it is seated against the forward seal disk.

2-7. Fig.-9: Thread the forward closure assembly into the forward end of the motor case by hand until it is seated against the case.

2-8. Fig.-10: Insert the nozzle into the aft end of the motor case, with the nozzle flange seated against the liner assembly.

2-9. Fig.-11: Place the greased aft (3/16” thick X 3-5/8” O.D.) o-ring into the groove in the nozzle.

2-10. Fig.-12: Thread the aft closure into the aft end of the motor case by hand until it is seated against the case. **NOTE:** There will be considerable resistance to threading in the closure during the last 1/8” to 3/16” of travel. It is normal if a slight (1/16” to 3/32”) gap remains between the closure and the case, and the grains rattle slightly in the liner after tightening.
Chapter 3. Preparation For Flight
Install Igniter Against Smoke Charge

Chapter 4. Post-Recovery Cleanup
NOTE: Perform motor clean-up as soon as possible after motor firing. Propellant and delay residues become difficult to remove after 24 hours and can lead to corrosion of the metal parts. Place the spent motor components in the reload kit plastic bags and boxes and dispose of properly.

4-1. After the motor has cooled down, unthread and remove the forward and aft closures.

4-2. Remove the smoke charge insulator from the forward closure and discard. Using wet wipes or damp paper towels, remove all delay and propellant residue from the closures.

4-3. Remove and discard the forward and aft o-rings from the motor case. Remove the liner, forward seal disk and nozzle from the casing by pushing on the seal disk end. Remove the forward seal disk from the liner, and remove and discard the forward seal disk o-ring. DO NOT DISCARD THE FORWARD SEAL DISK! Discard the nozzle and liner. Using wet wipes or damp paper towels, wipe the inside of the casing and forward seal disk to remove all propellant residue.

4-4. Apply a light coat of grease to all threads and the inside of the motor case. Reassemble metal parts and store motor in a dry place.

Chapter 5. First Aid
For a minor burn, apply a burn ointment. For a severe burn, immerse the burned area in ice water at once and see a physician as quickly as possible. In the unlikely event of oral ingestion of the propellant, induce vomiting and see a physician as quickly as possible. The AeroTech/RCS composite propellant consists primarily of ammonium perchlorate and a rubber-like plastic elastomer.

Chapter 6. Disposal
Damaged or defective reload kits should be returned to RCS.

Chapter 7. Fire Safety
Tests show that the pyrotechnic components of RMS™ reload kits will not explode in fires and normally will not ignite unless subjected to direct flame and then will burn slowly. Use water to fight any fires in which AeroTech/RCS RMS™ reload kit pyrotechnic components may become involved. Direct the water at the AeroTech/RCS RMS™ reload kit pyrotechnic components to keep them below their 550 deg. F autoignition temperature. Foam and carbon dioxide fire extinguishers will NOT extinguish burning propellants of the type used in RMS™ reload kit pyrotechnic components. Keep reload kit pyrotechnic components away from flames, sources of heat and flammable materials.

Disclaimer and Warranty
NOTE: As we cannot control the storage and use of our products, once sold we cannot assume any responsibility for product storage, transportation or usage. RCS shall not be held responsible for any injury, property damage resulting from the handling, storage or use of our products. The buyer assumes all risks and liabilities therefrom and accepts and uses AeroTech/RCS products on these conditions. No warranty either expressed or implied is made regarding AeroTech/RCS products, except for replacement or repair, at RCS's option, of those products which are proven to be defective in manufacture within one year from the date of original purchase. For repair or replacement under this warranty, please contact RCS. Proof of purchase will be required. Note: Your state may provide additional rights not covered by this warranty.

This Package Contains One Reload Kit:

- K680R-P (98/2560)
- L1300R-P (98/5120)
- M1600R-P (98/7680)
- M2000R-P (98/10240)

NOTE: This reload kit MUST be used with separately packaged K680R-M2000R propellant grains and motor liner tube. RMS™-98 reload kits do not include an ejection charge. RMS™-98 motors must be in conjunction with a timer, altimeter or radio-actuated recovery system.

NOTE: This reload kit is ONLY for use in AeroTech/RCS or Dr. Rocket™ RMS™ 98mm high-power motors. Certified by the Tripoli Rocketry Association (TRA).

DO NOT OPEN RELOAD KIT UNTIL READY TO USE

Typical Time-Thrust Curves:
