READ THIS BEFORE YOU BEGIN:

- Study the illustrations and sequence of assembly. THE SEQUENCE OF ASSEMBLY IS EXTREMELY IMPORTANT. READ ALL INSTRUCTIONS BEFORE USE. USE KBA LOADED MOTORS AND RELOAD KITS ONLY IN ACCORDANCE WITH ALL INSTRUCTIONS. Review the parts list and become familiar with all parts before assembly. IF ANY PARTS ARE MISSING OR DAMAGED, CONTACT RCS AT 1-435-865-7100.

- DO NOT USE ANY PARTS OF THE KBA SYSTEM THAT ARE DAMAGED IN ANY WAY. If in doubt, contact RCS at the number above for assistance.

- DO NOT MODIFY THE MOTOR IN ANY WAY. Modification of the motor or the reload kit parts could result in motor failure, lead to the destruction of both your rocket and motor and may cause personal injury, death and/or property damage. Modification of the motor or reload kit in any way will invalidate your motor warranty.

- USE ONLY KBA RELOAD KITS AND MOTOR PARTS TO REFURBISH YOUR KOSDON TRM MOTOR. The reload kits have been designed specifically for use in your particular Kosdon TRM motor. Use of imitation components may destroy your motor, rocket and payload and will invalidate your motor warranty. Only use KBA reload kits intended for your specific Kosdon TRM motor. DO NOT INTERCHANGE PARTS! Do not use KBA reload kits or motor components for any other purpose than to refurbish a Kosdon TRM motor.

- DO NOT REUSE ANY OF THE DISPOSABLE PARTS OF THE KBA RELOAD KIT. This includes the liner and o-rings. These components have been designed for one use only and must be discarded after firing. Reuse can result in motor failure during subsequent operation and will invalidate your motor warranty.

- Motors are hot after firing. Although the KBA motor operates at a temperature lower than most disposable motors, the higher thermal conductivity of the aluminum motor parts may make it seem otherwise. If necessary to handle a motor before it has cooled down, use a rag or similar article.

Chapter 1. Forward Bulkhead Assembly

1-1. Apply a light coat of Synco™ Super Lube™ or other grease to all three (3) o-rings. This will facilitate assembly and promotes proper sealing of the o-rings.

1-2. Fig.-1 & 2: Chamfer both inner edges of the delay insulator with your fingernail. Assemble the KBA delay element, delay insulator, aft delay spacer (if supplied) and delay o-ring as shown.

1-3. Fig.-3: Insert the forward delay spacer (7/8" O.D. neoprene washer) into the forward bulkhead delay cavity until it is seated against the forward end of the cavity. Apply a light film of grease to the inner circumference of the delay cavity (but not the forward end of the cavity).

1-4. Fig.-3: Insert the completed delay assembly shown in Fig.-2 into the forward bulkhead delay cavity. o-ring end first, until it is seated against the forward delay spacer. NOTE: If required, apply grease or masking tape on the outside of the delay assembly for a tight fit in the bulkhead.

1-5. Fig.-3: Install a greased 1-7/8" O.D. X 1/8"-o-ring in the outside groove in the forward bulkhead.

Chapter 2. Case Assembly

2-1. Fig.-4: Place the greased nozzle o-ring (1-7/8" O.D. X 1/8") into the groove in the graphite nozzle.

2-2. Fig.-4: Put grease on your index finger and wipe a film of grease on the I.D. of both ends of the case. Using a twisting motion, install the nozzle into the end of the case that has the external snap ring groove (if applicable). Note from the drawing the proper orientation of the nozzle.

2-3. Fig.-5: Install the steel nozzle washer in the case, seated against the graphite nozzle.

2-4. Fig.-5: Using the snap ring pliers, install a 54mm snap ring into the nozzle end of the case. To prevent eye injury if a snap ring slips out of the pliers, wear eye protection and hold the motor casing at a right angle to yourself.

2-5. Fig.-6: Install the four propellant grains into the yellow paper liner tube, until flush on both ends.

2-6. Fig.-7: Apply a light coat of grease to the outside of the liner. Install the liner assembly into the case until seated against the nozzle.

2-7. Fig.-8: Using a twisting motion, install the previously assembled forward bulkhead assembly into the forward end of the motor case until it is seated against the propellant grains. Note from the drawing the proper orientation of the forward bulkhead.

2-8. Fig.-8: Using the snap ring pliers, install a 54mm snap ring into the internal groove on the bulkhead end of the case. To prevent eye injury if a snap ring slips out of the pliers, wear eye protection and hold the motor casing at a right angle to yourself. NOTE: It is normal if the grains rattle slightly inside the case.

Chapter 3. Ejection Charge Installation

3-1. Fig.-9: Insert the 1/4" pipe nipple into the threaded end of the forward bulkhead. WARNING: DO NOT insert the pipe nipple into the forward bulkhead if the bulkhead contains any traces of black powder. Clean out all traces of powder from the bulkhead prior to installation. Dispense enough FFFG black powder into the cavity of the pipe nipple to reliably activate the recovery system in the rocket that the motor is going to be installed in. Seal the open end of the pipe nipple with paper wadding or masking tape.

3-2. Fig.-9: With the motor held in a NOZZLE DOWN position, gently shake the motor to settle the ejection charge into the cavity above the delay element.

KOSDON TRM™ 54MM MOTOR HARDWARE

- 54/1400 TRM™ case 1
- 54mm TRM™ forward bulkhead 1
- 54mm TRM™ nozzle w/484° throat 1
- 54mm nozzle washer (steel) 1
- 54mm snap rings 2
- 1/4" pipe nipple 1

KOSDON TRM™ RELOAD KIT

- Propellant grains 4
- Liner tube 1
- Silicone o-rings (1-7/8" O.D. X 1/8") 2
- Delay insulator (.875" O.D. X .790" long) 1
- Delay o-ring (22.5 mm O.D. X 3.75 mm thick) 1
- Aft delay spacer (.615" O.D. colored paper ring) 1
- Forward delay spacer (.780" O.D. neoprene washer) 1
- Delay element (.61" O.D. solid part) 1

DO NOT REUSE ANY OF THE DISPOSABLE PARTS OF THE KBA RELOAD KIT. This includes the liner and o-rings. These components have been designed for one use only and must be discarded after firing. Reuse can result in motor failure during subsequent operation and will invalidate your motor warranty.

DO NOT OPEN RELOAD KIT UNTIL READY TO USE.

SAVE THE RELOAD KIT PLASTIC BAG FOR THE USED RELOAD PARTS. DISPOSE OF BAG AND PARTS PROPERLY.

ITEMS NEEDED FOR USE:

- Synco™ Super Lube™, Dow Corning 111 or other grease
- Snap ring pliers
- FFFG black powder
- Masking tape or paper wadding
- 1-3/4" O.D. wooden dowel
- Wet wipes or damp paper towels

Chamfer both inner edges of the delay insulator with your fingernail. Assemble the KBA delay element, delay insulator, aft delay spacer (if supplied) and delay o-ring as shown.
Chapter 4. Preparation For Flight
Install Igniter Against Delay Charge

Chapter 5. Mixfires
If a mixfire occurs and a loaded KBA motor does not ignite for any reason within five seconds of pressing the launch button, release the launch button and remove the safety key from the electrical launch controller. WAIT ONE MINUTE before approaching or allowing anyone else to approach the rocket. Keep your fingers and hands out from underneath the rocket and away from the possible path of the exhaust jet. Do not place any part of your body over the launch pad. Disconnect the igniter clips from the electrical igniter. Carefully remove the igniter from the motor, and install a new igniter and repeat the launching process.

Chapter 6. Post-Recovery Cleanup
NOTE: Perform motor clean-up as soon as possible after motor firing. Propellant and delay residues become difficult to remove after 24 hours and can lead to corrosion of the metal parts. Place the spent motor components in the reload kit plastic bag and dispose of properly.

Chapter 7. First Aid
For a minor burn, apply a burn ointment. For a severe burn, immerse the burned area in ice water at once and see a physician as quickly as possible. In the unlikely event of oral ingestion of the propellant, induce vomiting and see a physician as quickly as possible. The KBA reload kit composite propellant consists primarily of ammonium perchlorate and a rubber-like plastic elastomer.

Chapter 8. Fire Safety
Tests show that the pyrotechnic components of KBA reload kits will not explode in fires and normally will not ignite unless subjected to direct flame and then will burn slowly. Use water to fight any fires in which KBA reload kit pyrotechnic components may become involved: Direct the water at the KBA reload kit pyrotechnic components to keep them below their 550 deg. F autoignition temperature. Foam and carbon dioxide fire extinguishers will NOT extinguish burning propellants of the type used in KBA reload kit pyrotechnic components. Keep reload kit pyrotechnic components away from flames, sources of heat and flammable materials.

Disclaimer and Warranties
NOTICE: As we cannot control the storage and use of our products, once sold we cannot assume any responsibility for product storage, transportation or usage. RCS and/or Kosdon Enterprises shall not be held responsible for any personal injury or property damage resulting from the handling, storage or use of our product. The buyer assumes all risks and liabilities therefrom and accepts and uses RCS/KBA products on these conditions. No warranty either expressed or implied is made regarding RCS/KBA products, except for replacement or repair, at RCS’s option, of those products which are proven to be defective in manufacture within one year from the date of original purchase. For repair or replacement under this warranty, please contact RCS. Proof of purchase will be required. Notice: Your state may provide additional rights not covered by this warranty.
