Before You Begin

• Do not modify the motor in any way.
• If any parts are missing or damaged, call AeroTech at 435-865-7100.
• Use only AeroTech RMS reload kits to refurbish an RMS motor.
• Do not interchange parts from different reload kits.
• Do not reuse any parts of the RMS reload kit.
• Save the reload kit plastic bag for the used reload kit parts. Dispose of bag and parts properly.

Hardware and Supplies Required

RMS 29mm "high power-style" aft closure
RMS 29/120 high power-style case
29mm high power-style standard forward closure
-or-
29mm reload adapter system (also refer to RAS instructions)
Synco™ Super Lube™ or other grease
Hobby knife
Wet wipes or damp paper towels

Preparation for Flight

1. Insert the coated end of the FirstFire™ initiator through the nozzle throat, push it slightly to the side and rotate the motor until you find the offset “moon” core. Continue pushing the igniter into the core until it stops against the forward insulator.
2. Secure the initiator to the nozzle with a piece of masking tape.
3. Install the motor into the rocket's motor mount tube. Ensure that the motor is securely retained in the rocket by using positive mechanical means to prevent it from being ejected during recovery system deployment.
4. Prepare the rocket’s recovery system and then launch the rocket in accordance with the Tripoli Rocketry Association (TRA) Safety Code and National Fire Protection Association (NFPA) Code 1127.

Post-Recovery Cleanup

NOTE: Perform motor clean-up as soon as possible after motor firing. Propellant and smoke charge residues become difficult to remove after 24 hours and can lead to corrosion of the metal parts. Place the spent motor components in the reload kit plastic bag and dispose of properly.
1. After the motor has cooled down, unthread and remove the forward and aft closures.
2. Remove the delay charge assembly components from the forward closure and discard. Using wet wipes or damp paper towels, remove all delay charge and propellant residue from the closures.

Post-Recovery Cleanup (cont’d)

3. Remove and discard the forward and aft o-rings from the motor case. Remove the liner, aft and forward insulators and nozzle from the casing by pushing on the nozzle end and discard. Using wet wipes or damp paper towels, wipe the inside of the casing and the forward seal disk to remove all propellant residue.
4. Apply a light coat of grease to all threads and the inside of the motor case. Reassemble metal parts and store motor in a dry place.

First Aid

For a minor burn, apply a burn ointment. For a severe burn, immerse the burned area in ice water at once and see a physician as quickly as possible. In the unlikely event of oral ingestion of the propellant, induce vomiting and see a physician as quickly as possible. Metalstom composite propellant consists primarily of Ammonium Perchlorate and a rubber-like plastic elastomer.

Disposal

Damaged or defective reload kits should be returned to RCS.

Fire Safety

Tests show that the pyrotechnic components of RMS™ reload kits will not explode in fires and normally will not ignite unless subjected to direct flame and then will burn slowly. Use water to fight any fires in which AeroTech RMS™ reload kit pyrotechnic components may become involved. Direct the water at the AeroTech RMS™ reload kit pyrotechnic components to keep them below their 550 deg. F autoignition temperature. Foam and carbon dioxide fire extinguishers will NOT extinguish burning propellants of the type used in RMS™ reload kit pyrotechnic components. Keep reload kit pyrotechnic components away from flames, sources of heat and flammable materials.

Disclaimer and Warranty

NOTICE: As we cannot control the storage and use of our products, once sold we cannot assume any responsibility for product storage, transportation or usage. RCS shall not be held responsible for any personal injury or property damage resulting from the handling, storage or use of our product. The buyer assumes all risks and liabilities therefrom and accepts and uses AeroTech/RCS products on these conditions. No warranty either expressed or implied is made regarding AeroTech/RCS products, except for replacement or repair, at RCS’s option, of those products which are proven to be defective in manufacture within one year from the date of original purchase. For repair or replacement under this warranty, please contact RCS. Proof of purchase will be required. Note: Your state may provide additional rights not covered by this warranty.

HIGH-POWER RMS™
Reloadable Motor System™

G25W-10A Rocket Motor Reload Kit
For RMS-29/120 Motor Hardware
White Lightning™ Composite Propellant

To adjust time delay, use AeroTech Reload Delay Kits (RDKs) or drill delay 1/32" per second of adjustment using twist drill or optional AeroTech RMS Delay Drilling Tool (RDDT, P/N T082510-1). Drilled end faces propellant.

WARNING-FLAMMABLE: Read Instructions Before Use. Use RMS reload kits only in accordance with instructions. Sale to persons under 18 years of age prohibited by federal law. For use only by persons 18 years of age or older. Ignite by electrical means only. Do not smoke when loading RMS motors or use in the vicinity of open flames. CAUTION: Keep out of reach of children. Follow NAR & TRA safety codes at all times. Motor hot after firing.

G25W-10A Typical Time-Thrust Curve

Motor Specifications

Total Impulse: 120 N-sec
Propellant Wt.: 62.5 grams
Loaded Wt.: 168 grams
Motor Diameter: 29mm
Burn Time: 4.5 seconds
Peak Thrust: 14 pounds
Delay Time: 10 seconds (adjustable)
Motor Length: 5.87"
1. Lightly grease o-rings (15) and case threads (6) and delay cavity of forward closure (12) (but not the forward end of cavity).
2. Assemble nozzle (3), aft o-ring (4), and aft closure (2) with the forward closure (12) and forward-o-ring (15) until seated.
3. Install forward delay spacer (16) into forward closure (12), then push step 2 delay assembly into forward closure (12) o-ring end first.
4. Insert propellant grain (7) into liner (5) then push liner assembly into the end of the case from inside of the chambered end of the propellant grain.
5. Insert forward insulator (8) and forward o-ring (9) into the forward end of the case opposite from chamfered end of the propellant grain.
6. Thread forward closure (12) into the forward end of the case (6) with the forward insulator (8) and forward o-ring (9) until seated.
7. Assemble ejection charge (13) into forward closure (12) and seal end with ejection charge cap (14).
8. Dispense ejection charge (13) into forward closure (12) and seal end with ejection charge cap (14).

NOTE: THE DRAWING SHOWN BELOW MAY BE A GENERIC REPRESENTATION OF THE ACTUAL MOTOR. NOZZLE SIZE, NUMBER AND SIZE OF PROPELLANT GRAINS AND LENGTH OF DELAY GRAIN & SPACER MAY BE DIFFERENT FOR A DETACHED ASSEMBLY DRAWING OF THIS MOTOR PLEASE VISIT THE AEROTECH WEBSITE AT WWW.AEROTECH-ROCKETRY.COM
